

**COIL SPRING SUSPENSION**

**Highlighted:** Upper Coil Spring Spacer

**TORSION BAR SUSPENSION**

**Highlighted:** Torsion Bar Keys

**STRUT/COILOVER SUSPENSION**

**Highlighted:** Lower and Upper Strut Spacers

**WHAT IS A LEVELING KIT?**

A leveling kit is designed to modify only the front suspension. Installation of a leveling kit will achieve a more level stance front to rear (also known as eliminating rake).

**WHAT IS A LIFT KIT?**

A lift kit is designed to modify the front and rear suspension. Installation of a lift kit will achieve a lifted appearance (In many cases still maintaining a high tail stance).

**WHAT IS A BODY LIFT?**

A body lift is designed to achieve lift by spacing the body apart from the frame. Installation of a body lift does lift the entire body of the vehicle the same amount, and the suspension is not modified.

**WHAT IS A COMBO KIT?**

A combo kit includes a leveling kit (or lift kit) in addition to a body lift, and is designed to provide more lift than a leveling kit or body lift alone can properly achieve.
